**ONE INVERTER = ONE SOLAR PANEL**

The revolutionary Enphase micro-inverter matches one inverter with each solar panel without increasing overall system cost. This provides maximum energy production from each panel, eliminates losses from array shading, provides no single point of failure, and allows each panel to be monitored individually. Each inverter is mounted out of sight beneath a solar panel.

Canadian Solar photovoltaic modules provide industry leading power tolerance and exceptional efficiency, along with an outstanding 25 year module power output warranty.

Together, the Enphase inverter and Canadian Solar module produce amazing performance, reliability, and monitoring. The system installs quickly and allows for future expansion. Maximize your solar energy investment with an Enphase / Canadian Solar alternative energy system.
